eMOLST NUMBER (THIS IS NOT AN eMOLST FORM)

Do-Not-Resuscitate (DNR) and Other Life-Sustaining Treatment (LST)

This is a medical order form that tells others the patient's wishes for life-sustaining treatment. A health care professional must complete or change the MOLST form based on the patient's current medical condition, values, wishes, and MOLST Instructions. If the patient is unable to make medical decisions, the orders should reflect patient wishes, as best understood by the health care agent or surrogate. A physician or nurse practitioner must sign the MOLST form. All health care professionals must follow these medical orders as the patient moves from one location to another, unless a physician or nurse practitioner examines the patient, reviews the orders, and changes them.

MOLST is generally for patients with serious health conditions. The patient or other decision-maker should work with the physician or nurse practitioner and consider asking the physician or nurse practitioner to fill out a MOLST form if the patient:

- Wants to avoid or receive any or all life-sustaining treatment.
- Resides in a long-term care facility or requires long-term care services.
- Might die within the next year.

If the patient has an intellectual or developmental disability (I/DD) and lacks the capacity to decide, the doctor (not a nurse practitioner) must follow special procedures and attach the completed Office for People with Developmental Disabilities (OPWDD) legal requirements checklist before signing the MOLST. See page 4.

SECTION A Resuscitation Instructions When the Patient Has No Pulse and/or Is Not Breathing

Check **one**:

CPR Order: Attempt Cardio-Pulmonary Resuscitation

CPR involves artificial breathing and forceful pressure on the chest to try to restart the heart. It usually involves electric shock (defibrillation) and a plastic tube down the throat into the windpipe to assist breathing (intubation). It means that all medical treatments will be done to prolong life when the heart stops or breathing stops, including being placed on a breathing machine and being transferred to the hospital.

DNR Order: Do Not Attempt Resuscitation (Allow Natural Death)

This means do not begin CPR, as defined above, to make the heart or breathing start again if either stops.

SECTION B Consent for Resuscitation Instructions (Section A)

The patient can make a decision about resuscitation if he or she has the ability to decide about resuscitation. If the patient does NOT have the ability to decide about resuscitation and has a health care proxy, the health care agent makes this decision. If there is no health care proxy, another person will decide, chosen from a list based on NYS law. Individuals with I/DD who do not have capacity and do not have a health care proxy must follow SCPA 1750-b.

SIGNATURE Check if verbal consent (Leave signature line blank) _____

SECTION F Review and Renewal of MOLST Orders on this MOLST Form

The physician or nurse practitioner must review the form from time to time as the law requires, and also:

- If the patient moves from one location to another to receive care; or
- If the patient has a major change in health status (for better or worse); or
- If the patient or other decision-maker changes his or her mind about treatment.

Requirements for Completing the MOLST for Individuals with Intellectual or Developmental Disabilities

Completing the MOLST for individuals with I/DD who lack capacity to make their own health care decisions and do not have a health care proxy:

- The law governing the decision-making process differs for individuals with I/DD. Surrogate's Court Procedure Act (SCPA) Section 1750-b must be followed when making a decision for an individual with I/DD who lacks capacity and does not have a health care proxy.
- MOLST may only be signed by a **physician**, not a nurse practitioner.
- Completion of the **MOLST legal requirements checklist for individuals with I/DD**, including notification of certain parties and resolution of any objections, is **mandatory prior to completion of MOLST**. The checklist is available on the NYS OPWDD website.
- The checklist should be completed when an authorized surrogate makes a decision to **withhold or withdraw life sustaining treatment (LST)** from an individual with I/DD. There are specific medical criteria, included in Step 4 of the checklist. The individual's medical condition must meet the specified medical criteria **at the time the request to withhold or withdraw treatment is made**.
- **Trials** – whether or not a new checklist is required following an unsuccessful trial of LST depends on the parameters of the trial, as specified in Step 2 of the checklist. If Step 2 of the checklist has provided that a trial for LST is to end after a specific period of time or the occurrence of a specific event, it may not be necessary to complete a new checklist following the trial. However, if a trial period is open ended, and the authorized surrogate subsequently decides to request withdrawal of the LST, a new checklist would be required.
- The checklist and 1750-b process apply to individuals with I/DD, regardless of their age or residential setting.
